D. Courlander B-5 (1837-1969) 1962 SV3 Haiti SV3

easily be hidden, but the gumbos were simply slipped into the straw roofs and thus put out of sight. Moreover, by some strange process of reasoning, military authorities regarded the bamboos as "harmless," though they were used for the same purposes as the contraband drums. 534 648 798

There are numerous other kinds of simple percussion devices. One such instrument, now less commonly seen than previously, is a length of open bamboo laid in the crotches of two Y-shaped sticks set in the ground. Like other *catas*, the bamboo is beaten with two sticks. Some Haitians believe that in former days such bamboos were played in batteries like a xylophone. 534

Sometimes a light-weight wooden cylinder, or perhaps a drum demuled of its playing head, is carried by the timekeeper of a coumbite. It, also, is played on the side with sticks. [461] [476]

Wooden mortars for pulverizing grain take on the character of musical instruments when used in combination with voices. When two or more mortars are used, with two men or women wielding the long polelike pestles in each mortar, the rhythmic effects can become fairly complicated. 534 533 412

The *claves* or *palos* (small hardwood sticks) are used primarily in connection with secular dances of a Cuban type, or to accompany such instruments as the guitar and the marimba. One stick is held loosely in the natural fold of the hand, so that it is free to vibrate, and is struck sharply with the second stick. The tone is almost metallic because of the hardness of the wood, usually lignum vitae. The name of the instrument is recognizable as a form of *clavar*, or *clavo*, Spanish for "peg" or "nail." It is thought that wooden shipbuilding pegs provided the name for this device, which has equivalents in West Africa. 534 535 [177] [824] [171]

Among the folk instruments there are various kinds of horns and trumpets. Cows' horns are played musically in some parts of the southern peninsula, though usually they are used as ritual instruments and signaling devices. Wooden trumpets called *pitous* are carved from the stems of the papaya tree. Conch-shell trumpets, known as *lambis*, are commonly used as signaling devices by fishermen. They are also to be found among the coumbites, in Rara festivities, and occasionally in rituals, where they are usually identified with sea deities. In carnival times the old fashioned phonograph horn makes its appearance as a combined trumpet and voice amplifier. 534 184 [824] [202] [541] [216]

Probably the most important of the trumpets is the one made of bamboo. It is called a *carrizo*[*] or *bois bourrique*. Both names have interesting origins. The cow's horn was at one time used for magico-medical purposes. The leaf doctor used it as an "applicator" of powders and potions. A small opening was made in the point of the horn, and 534 755 [837]
